DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Mizumoto (JP 6-216785 “IDS”).

Referring to Claim 1, Mizumoto teaches a transmission circuit comprising:

a power amplifier whose gain is controlled (see paragraph [0011]);

a detector which detects a transmission signal from the power amplifier and outputs a detection voltage corresponding to a level of the signal (see paragraph [0012]); and

a gain controller which compares a transmission power set voltage for setting the level of the transmission signal to be outputted from the power amplifier with the detection voltage and supplies a gain control voltage to the power amplifier (see paragraph [0013]), wherein the transmission power set voltage is sent through a low pass filter to the gain controller (see paragraph [0016]).

Referring to Claim 2, Mizumoto also teaches the low pass filter including an integration circuit (see paragraph [0016]).

Referring to Claim 3, Mizumoto also teaches an open/close switch to activate or inactivate the power amplifier, and wherein the transmission power set voltage is sent through the open/close switch to the low pass filter (see paragraph [0015]).
